THE COMPANY

Background

For over sixty years, our company has been operating in Italy and abroad in the field of **applied electrical and mechanical technologies**, offering experience, expertise and organisation to solve any problem during the design and implementation phase.

In this context, every problem is entrusted to our Technical Department, which occupies a key position within our company. A team of professionals examines, processes and produces all the necessary documentation, including technical drawings, quotes, timing of construction and subsequent management of the system, for a hypothesis of a technologically valid solution. Our daily experience allows us to scrupulously choose the materials and components that are reliable in terms of brand, quality, guarantee and compliance with the laws in force.

CONSTRUCTION OF SYSTEM

A fundamental role is played by our highly specialised and qualified technicians and installers who at the end of the assembly cycle perform a thorough check before installing the finished product. Our specialised teams ensure construction of the systems with the utmost professionalism and efficiency attributable to the experience of the site managers and team leaders who coordinate the work.

The continuous updating in market demands enables us to offer a high-level integrated electrical and mechanical service, at competitive costs and in compliance with the scheduled times.

In both the electrical and mechanical divisions, we operate with special attention paid to technological innovations and constant respect for the environment and health. We design and build systems using state-of-the-art equipment and suitably trained personnel, addressing our offer to a highly varied and heterogeneous clientèle, covering the hospital, residential, tertiary, industrial and hotel sectors.

The integrated electrical and mechanical service generates economy and simplicity in managing the site. The construction management has a single spokesperson, which makes solving problems quick and easy.

ELECTRICAL SYSTEMS

- INDUSTRIAL AND CIVIL ELECTRICAL SYSTEMS
- HIGH, MEDIUM AND LOW VOLTAGE SUB-STATIONS
- CONSTRUCTION AND ASSEMBLY OF ELECTRICAL PANELS
- INSTRUMENTAL AND AUTOMATION SYSTEMS
- PHOTOVOLTAIC SYSTEMS

MECHANICAL SYSTEM

- INDUSTRIAL AND CIVIL HYDRAULIC SYSTEMS
- HYDRAULIC-DOMESTIC HOT WATER SYSTEMS
- HEATING SYSTEMS
- AIR CONDITIONING SYSTEMS
- AIR TREATMENT SYSTEMS
- SOLAR-THERMAL SYSTEMS

SPECIAL SYSTEM

- DATA NETWORK AND DATA CENTRE INFRASTRUCTURE
- WIRELESS DATA NETWORK
- VIDEO SURVEILLANCE AND VIDEO ANALYSIS SYSTEMS
- ACCESS CONTROL SYSTEMS
- BUILDING AUTOMATION

SERVICES AND MAINTENANCE

- OPERATION AND MAINTENANCE OF THERMAL AND REFRIGERATION PLANTS ACCORDING TO REGULATORY REQUIREMENTS
- MAINTENANCE OF MECHANICAL SYSTEMS
ORDINARY, EXTRAORDINARY AND WITH SUPERVISION
- MAINTENANCE OF ELECTRICAL SYSTEMS:
ORDINARY, EXTRAORDINARY AND WITH SUPERVISION
- BUILDING AUTOMATION MANAGEMENT

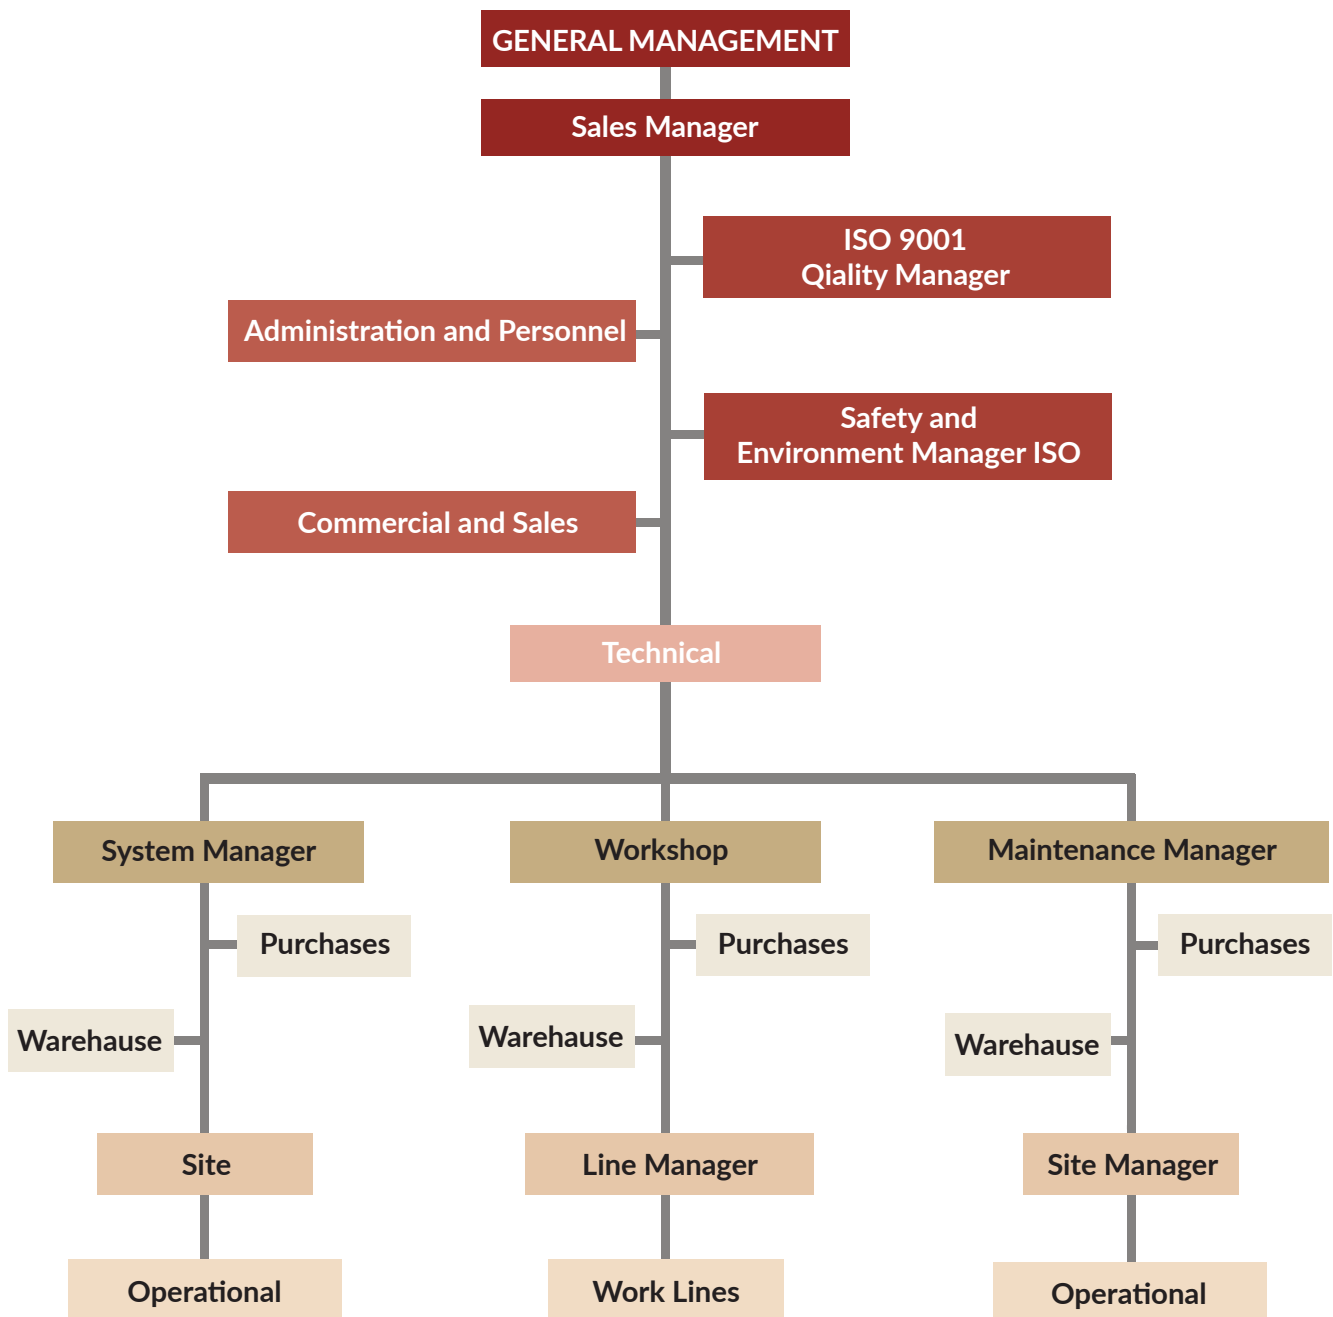

THE COMPANY

The Organisation

THE POTENTIALS OF OUR COMPANY

- Technical Department
- Product or service Managers
- Site Managers
- Drivers with our vehicles
- Warehouse
- Quality Manager
- Safety and Environment Manager
- Installers: 100 people

THE COMPANY

The Mission

We are a company that provides “the service of electrical and mechanical technologies”. Competence, reliability and flexibility are the concepts that guide our company. All this is needed to give our customers precise, reliable and quick answers. The goal of our mission is to create high value for our shareholders, our customers and all our employees. Complying with the laws, equity and cultural role are always at the basis of our choices.

OUR VALUES

The Customer at

**Satisfying our customers' requests is our priority,
by constantly improving our services.**

Technology

**Technology allows us to make our services
more efficient and faster.**

Innovation and

**Innovation is the basis of business activity
and prepares us for the future.**

Tradition and experience

**Over 50 years of experience and tradition bind us to the past
but at the same time give us the competence and ability
to be ready for any challenge.**

$$1 + 1 = 3$$

Where the + sign does not express
only a simple addition operation,
but our **ADDED VALUE**

$$1 \text{ TEA S.p.A. CO } 1 = 3$$

That brings with it
design and implementation experience
made available for every request.

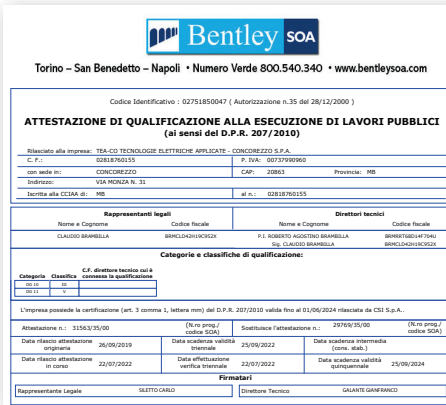

COMPANY REQUIREMENTS

- Registered in the Milan Chamber of Commerce since 1975 under no. 927673
- The company is in possession of the technical requirements provided by the MD law 37/08 letters: A, B, C, D, E, F, G.
- Bentley SOA certificate no. 29769/35/00 cat. OG 10 (III) cat. OG 11 (V)
- Quality System Certificate UNI EN ISO 9001:2015 no.SQ 00378/B
- Quality System Environment Certificate UNI EN ISO 14001:2015 no. SGA 17263
- Safety System Certificate UNI ISO 45001:2018 no. SHS 140023
- FGAS certification no. 20671-2107018
- Included in the White List ★★★★★

ENVIRONMENTAL SUSTAINABILITY

Teaco Plastic Free

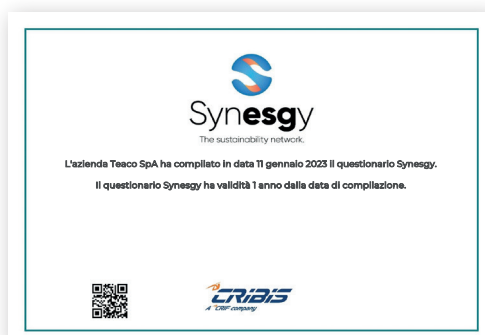

Starting from the year 2023, Teaco has been focusing its attention on the environment by creating the *Tea-co Plastic Free* project aimed at environmental sustainability, the fight against plastic pollution.

The goal of sustainable and environmentally friendly economic growth represents the effort that the company intends to pursue today and in the near future.

LET'S LOOK TO THE FUTURE

The *Tea-co Plastic Free* project is aimed at the definitive elimination of the use of plastic within company premises. This commitment affects both the workers involved in the company in any role and any other external person who comes into contact with our company. The adoption of this choice has had a considerable impact on the volumes of plastic waste collection, commonly referred to as "disposable", with waste being completely eliminated. The success of the project has inspired all the people involved in the company who, thanks to this initiative, have experimented with how it is possible, with very little effort, to improve the environment without compromising on normal daily habits.

From a practical point of view, to give life to this project, the company has implemented a number of corrective actions towards its suppliers, choosing from the available proposals those that are eco-sustainable and with less environmental impact and, at the same time, deciding to improve the separate collection system, already present in the company.

PRESTIGIOUS INTERVENTION

Leonardo - Il Cenacolo

Thanks to the interventions of Tea.co, *Il Cenacolo* has been equipped with a new air conditioning and air purification system.

"We also worked at night, slowly, to reduce vibrations during execution of the works, respecting the timetable thanks to the fundamental collaboration of everyone, including of the Dominican fathers," said Chiara Rostagno, director of the Museum.

A WORK THAT WILL LAST OVER TIME

With the new systems that will introduce 10,000 cubic meters of clean air per day, controlled by 90 sensors, the life of Leonardo's famous work has been extended by another five hundred years, and it will also be possible to increase the number of daily visitors (up to 33%), thus shortening the queues at the entrance.

Thanks to the interventions of Tea.co it will be possible to have air inside the refectory free from particulates and with a significant decrease in nanoparticles, with values that are 90% lower than the outside air. This is due to doubling of the AHUs (Air Handling Units) that now work in pairs and that in the event of faults can even work independently.

In addition to the filtering of dust thanks to the new suction systems, other improvements have been developed thanks to the work of the engineers.

THE COMPANY ABROAD

Teaco Maghreb

Over the years, Teaco Italia has developed a considerable focus on the foreign world, thus creating a company owned by Teaco under the name of **TEACO MAGHREB**.

Our young and dynamic team is facing a new challenge: to make our professionalism known to the world.

TEACO'S PHILOSOPHY

In Teaco we think,
and we are united in thiking,
that everything we do today
we can do better tomorrow.
Seriousness, dedication to work and discipline
are some of the characteristics
that reward us continuously during
the challenges we face each day.
